FREE WORKSHOP

Build AI-Powered Applications with Codex

Join us for a hands-on workshop where you'll learn how to build a complete AI-powered application using Codex, explore RAG pipelines, and streamline ML workflows with MLflow.

SESSIONS

Introduction to Generative AI & Agentic AI

Building a Full-Stack Application with Codex

RAG Pipelines & MLflow for Production AI

Q&A and Career Guidance

SESSION 1: INTRODUCTION TO GENERATIVE AI & AGENTIC AI (20 MINUTES)

Topics Covered

- What is Generative AI?
- Evolution from AI → LLMs → AI Agents
- Understanding Agentic AI
- Real-world business use cases
- Future opportunities for Developers and Students
- Introduction to Codex & Modern AI Tooling

Learning Outcome

Participants will understand the fundamentals of modern AI systems and how intelligent agents are transforming software development.

SESSION 2: BUILDING A FULL-STACK APPLICATION WITH CODEX (45 MINUTES)

Topics Covered

- Introduction to Codex Platform
- Application Architecture Overview
- Creating Frontend Components
- Designing Backend Services
- Building and Testing APIs
- Designing and Consuming 10+ APIs
- Connecting Frontend with Backend
- Application Deployment Walkthrough

Hands-on Demonstration

Build a complete working application from scratch.

Learning Outcome

Participants will learn how to rapidly develop and deploy full-stack applications using Codex.

SESSION 3: RAG PIPELINES & MLFLOW FOR PRODUCTION AI (35 MINUTES)

Topics Covered

- What is a RAG Pipeline?
- Understanding Retrieval-Augmented Generation
- How AI Retrieves and Generates Contextual Responses
- Introduction to MLflow
- Managing ML Experiments with MLflow
- Tracking Model Lifecycles

Live Demo

Watch a live demo of a RAG pipeline retrieving and generating contextual responses, plus a walkthrough of MLflow for managing ML experiments.

Learning Outcome

Participants will learn the fundamentals of RAG pipelines and MLflow, and how they help build smarter, context-aware AI applications.

SESSION 4: Q&A AND CAREER GUIDANCE (20 MINUTES)

Discussion Topics

- AI Development Roadmap
- Agentic AI Career Opportunities
- Building AI Projects for Portfolio
- Industry Best Practices
- Open Q&A Session

Who Should Attend?

- Students
- Software Developers
- Full-Stack Engineers
- AI Enthusiasts
- Tech Professionals
- Anyone interested in Generative AI and Agentic AI

What You Will Learn

- Build a full-stack application using Codex
- Create and consume 10+ APIs
- Understand RAG pipelines and how AI retrieves and generates contextual responses
- Explore MLflow for managing ML experiments and model lifecycles
- Understand Generative AI, Agents and Agentic AI
- Learn practical AI application development techniques

Prerequisites

- Basic programming knowledge
- Laptop/Desktop with internet connection
- Curiosity to learn AI and modern application development
